

Electrical installation standard

VR-STD-ELE-002 Rev 3 2024-05-14

Page 1

1. Scope

This specification covers electrical installation standard for the VR-DEMO-001 demonstration project. It sets the minimum requirements for materials, workmanship, inspection and documentation.

2. References

Company standards listed in the document register, the project design basis and the applicable national codes in force at contract award.

3. Materials

Materials shall be new, traceable to mill or manufacturer certificates and stored to prevent damage and contamination. Substitutions require written approval through a technical query.

4. Execution

Work shall follow the issued-for-construction drawings and approved procedures. Hold points identified in the inspection and test plan shall be released before work proceeds.

5. Inspection and testing

Inspection records shall be kept for every item and handed over with the completions dossier. Non-conformances are raised, dispositioned and closed before mechanical completion.
